

Home Phone Calling Number Display

WHAT IS CALLING NUMBER DISPLAY?

Calling Number Display allows you to identify a caller by displaying the caller's phone number on your handset's screen (requires a compatible handset). Please note that Calling Number Display will not work for blocked numbers.

DISPLAY TERMINOLOGY

If you don't see a number displayed, you may see one of the following terms displayed when you have an incoming call:

Private

This means that the caller:

- has chosen to block their number, or
- has a silent line or unlisted number, or
- is calling from overseas (arriving via a carrier other than Telstra), or
- has their telephone service with a carrier or service provider that does not participate in Calling Number Display.

Unavailable

May mean that the call is from an overseas caller or a payphone. Some display devices may show the words 'Out of Area'.

Payphone

Indicates that the call is from a payphone. The word 'Payphone' will only appear if the display unit supports this option.
